

SECURING MEGA EVENTS WITH LEADING EDGE TECHNOLOGY

Safety & Security

High profile sporting events, music festivals, pop concerts and other mega events pose a significant security risk. The volume of people, the crowded environment and media coverage at such events are an alluring target for criminals, hooligans and terrorists.

As such, the associated operational, safety and security management characteristics present numerous risks and threats that must be realized and addressed.

The Challenge

The implications of such risks pose serious challenges. Predictive assessment capabilities, along with advanced real-time data analysis tools and stakeholder collaboration, will ensure that risks are mitigated, for the safety and well-being of participants and visitors.

Successful events require that each operational component, functions flawlessly and cohesively with all the others.

Our Solution

As a leading security and intelligence company Spire offers a comprehensive operational solution for complex security situations. Using proven methodologies and advanced software technology, all operational under a unified and central command & control management system.

Our ground breaking modular software technology, provides unrivalled flexibility, that means it can be adapted to meet exacting requirements, quickly, efficiently and with excellence.

Our mission is to provide a safe and secure operational environment without compromising spectators positive event experience

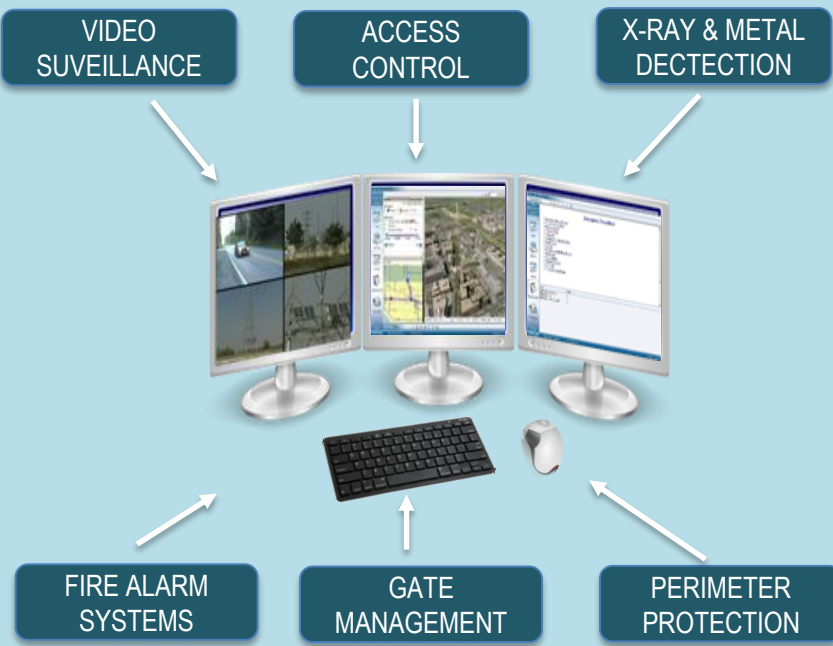

SECURING MEGA EVENTS WITH LEADING EDGE TECHNOLOGY

Our Technology: Command & Control

Our advanced mPrest software has the ability to monitor live real-time situations across multiple areas and access points; it warns, recommends and manages the required actions.

Successfully used across the world at several formula one venues and numerous stadium events, we have created and refined our holistic security solution that can be designed specifically for each clients individual needs.

Our flexible system can be used in many different ways; controlling and monitoring movement through secure access points, regulating who, where & when, fast scanning number plate recognition, as well as under vehicle inspection systems. A unique feature is the ability to mine into cyber and governmental intelligence providing facial identification that recognises known high-risk individuals. Also simultaneous viewing and recording live images of multiple sites with live playback of video surveillance, each client's needs will be fully accessed, agreed and delivered.

- ❖ Integrates all multiple sensors in operation
- ❖ Creates accurate real-time picture at control centre
- ❖ Immediate warning raised from potential risk factor
- ❖ Executes appropriate action response

Decades of security experience, a proven track record and a cutting edge technological solution make Spire an ideal security partner for any event.

Highly experienced team of security experts

Full end-to-end service capability

Cost efficient

Fast development time

Scalable and flexible software platform

Proven and tested in field
